# Broadcasting

Broadcasting is a feature in numpy that allows arrays of different shapes to be used in arithmetic operations.

```
a1 = np.array([5, 7, 9])
```

```
a2 = a1 + 5
```

```
print(a2)
```

$a_1$  [ 1, 2, 3 ] (3,)  $1 \times 3$

$a_4$  [ [ 1 ],  
[ 2 ],  
[ 3 ] ] (3,1)  $3 \times 1$

---

$a_1$   $a_3$   $a_4$

(3,)

(4,)

(3,1)

[ [ 1, 2, 3 ],  
[ 1, 2, 3 ],  
[ 1, 2, 3 ] ] [ [ 1, 1, 1 ],  
[ 2, 2, 2 ],  
[ 3, 3, 3 ] ]

The smaller array is broadcast across the larger array so that they have compatible shapes

$$a_2 = a_1 + s$$

$$a_2 = [5, 7, 9] + 5 \xrightarrow{\text{broadcasting}}$$

$$a_2 = [5, 7, 9] + [5, 5, 5]$$

$$a_2 = [10, 12, 14]$$

# Broadcasting Rules

When operating on two arrays, NumPy compares their shapes element-wise.

It starts with the trailing (rightmost) dimension

2d are compatible when

1. they are equal, or
2. one of them is 1

$$[1, 2, 3] + [4, 5, 6, 7, 8]$$

Value Error      (3,) and (5,) are not compatible

$$[1, 2, 3] + [4, 5, 6] \quad \text{Correct}$$

(3,) & (3,)

$$\begin{bmatrix} [1, 2, 3], \\ [3, 4, 5] \end{bmatrix} + [4] \quad \text{Correct}$$

(2,3) & (1,)

$$\begin{bmatrix} [1, 2, 3], \\ [3, 4, 5], \\ [6, 7, 8] \end{bmatrix} + \begin{bmatrix} [1, 2], \\ [3, 4] \end{bmatrix} \quad \text{Error}$$

(3,3) & (2,2)

$$[\begin{bmatrix} 1, 2 \\ 2, 3 \\ 3, 4 \end{bmatrix}, \quad + \quad \begin{bmatrix} 1, 2, 3 \end{bmatrix}] \quad (3, 2) \text{ & } (3,)$$
$$[\begin{bmatrix} 1, 2, 3 \\ 3, 4, 5 \end{bmatrix}, \quad + \quad \begin{bmatrix} 1, 2, 3 \end{bmatrix}] \quad (2, 3) \text{ & } (3,)$$
